Application developer - Python

SUPINFO INTERNATIONAL

2008 - 2013

IT Specialist

LANGUAGES

- Upper-intermediate (B2)

INTERESTS

- Reading / Audiobooks
- Finance
- Board games
- Video games

After acquiring solid experience in the field of data management (CMDB, PIM), I wanted to explore new horizons.

I therefore undertook a project-oriented training that provided me with a solid foundation in design patterns, architecture, and project management.

I am now looking for a job to leverage and develop my new skills by creating secure, scalable, maintainable, and reusable applications.

PROFESSIONAL SKILLS

- Write robust, documented Python code that adheres to PEP 8.
- Create unit, integration, functional, and performance tests.
- Debugging, errors handling, and exceptions management.
- Create a secure RESTful API with Django REST.
- Modular architecture, OOP, MVC, MVT patterns, etc.
- Set up a CI/CD pipeline.
- Database modeling (UML, ERD).
- Document an application.
- Knowledge of agile methodologies.
- Define functional and technical specifications based on client needs. Write and/or follow a specifications document.

PROFESSIONAL EXPERIENCE

PIM / DAM Manager

04/2017 - 11/2022

ALTERAL

- Maintain and develop our PIM, its structure, and its attributes.
- Collect, process, analyze, and distribute product information. +120% increase of sourced articles (from ~55 000 to 121 000)
- Improve human and automated processes involved.
- Encourage suppliers to provide data to our PIM. +43% from 87 to 124 suppliers.
- Assist associates in the implementation within their company.

Worth noting a project manager role on the side following a colleague departure. Implementation of a contract management solution. This involved exchanges with the provider about specifications, conducting tests, reporting bugs, etc.

CMDB Administrator

08/2011 - 10/2013

Groupama Supports et Services (G2S)

- Routine management
- Design and monitoring of consistency and integrity reports
- Collect data from various sources and consolidate it
- Control of architecture files modeling
- Version upgrades
- User support
